

Interesting facts about piramids

By Cătălin Pleșu

Some Had Flat Tops

We generally associate pyramids as a symmetrical triangle with a pointed top. This kind of pyramid was created by Egyptians. Their pyramid consisted of six layers and traveled 3.5 miles underground.

They Weren't The Only Structure Built

Pyramids had a religious purpose and in addition to them there were built other structures , for example the pyramids were surrounded by chapels, tombs and temples to help them reach the place where souls were supposed to go in afterlife

They Used To Sparkle

In our days pyramids look dull but in the past they used to reflected the light like a mirror because they were covered with polished limestone and this made them extremely visible.

Many Of Them Were Robbed

Plenty of history was lost because of tomb robbers. The pyramids were their target because the kings and the queens were buried with untold amounts of riches. Stealing from pyramids was offending and who was caught was executed.

It Is Still A Mystery How They Built Them

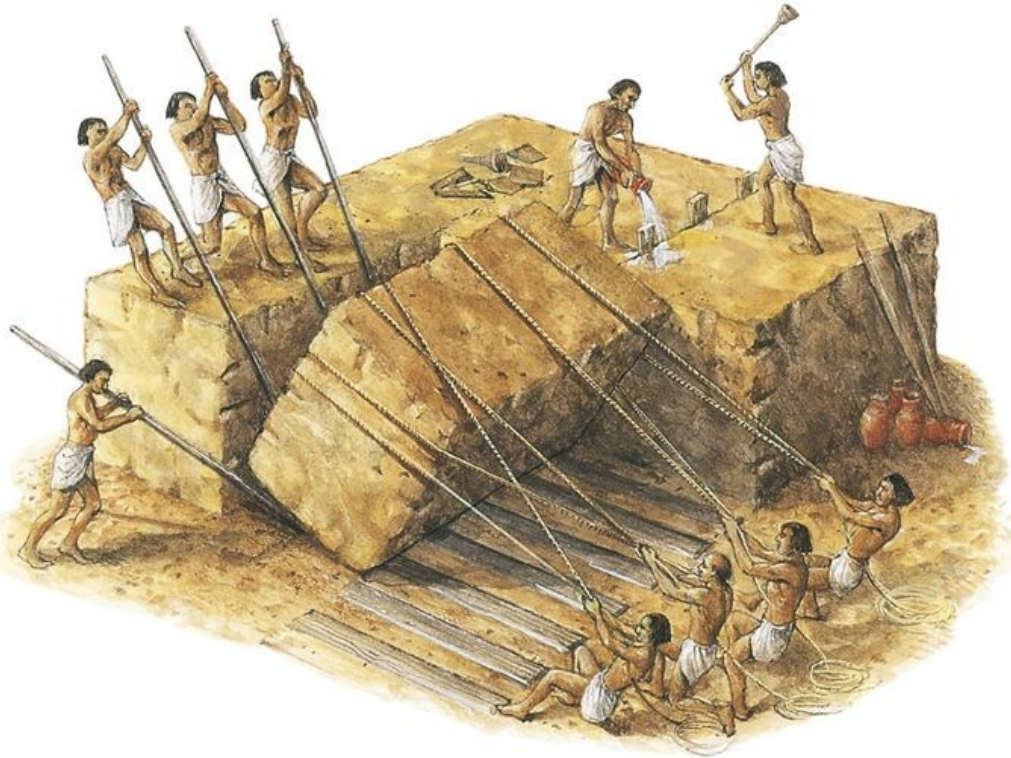

Pyramids were studied for years and there have been developed several theories some developed even 2000 years ago .The most accepted theory is that the pyramids were built from inside using ramps

The Great Pyramid Of Khufu Weighs 5,750,000 Tons

The great pyramid is composed of 2.3 million blocks of stone , each is weighting about 2.5 tons.

They Took About 23 Years To Complete

If we think how long it takes to repair Chişinău-s bypass belt you won't have any doubt that 23 years for a 5,750,000 ton construction isn't so much.
